REST API v1

API Documentation

Integrate key purchasing, activation and management into your systems via our REST API. Perfect for resellers and automated workflows.

Contact Manager Authentication

Getting Started

Follow these steps to start using the API:

1. **1. Create an account**
   Register on our website if you haven't already.
2. **2. Top up your balance**
   Go to your profile and deposit funds via cryptocurrency.
3. **3. Create an API key**
   In your profile settings, find the "API Key" section and create a new key. You can optionally restrict access to specific IP addresses.
4. **4. Integrate**
   Use your API key as a Bearer token in the Authorization header for all requests.

Authentication

All requests must include a Bearer token in the Authorization header. Create an API key in your profile settings.

To use the API, you need an access token. You can create one in your profile settings.

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  https://keys.ovh/api/v1/products
```

Requests without a valid token will receive a 401 error

GET /products

Returns a list of available products with subscription types, prices, volume discounts and stock status.

REQUEST

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  https://keys.ovh/api/v1/products
```

RESPONSE

terminal

```
{
  "success": true,
  "data": [
    {
      "slug": "chatgpt",
      "name": "ChatGPT",
      "subscription_types": [
        {
          "slug": "plus-1-month",
          "name": "Plus 1 Month",
          "duration_days": 30,
          "price": 12.50,
          "volume_prices": {
```

```
            "5": 11.00,
            "10": 10.00
          },
          "in_stock": true
        }
      ]
    }
  ]
}
```

POST /purchase

Purchase activation keys using your account balance. Keys are generated instantly and returned in the response. Supports volume pricing and idempotency.

PARAMETERS

product_slug `string` REQUIRED

Product slug from /products

subscription_type_slug `string` REQUIRED

Subscription type slug from /products

quantity `integer`

Number of keys to purchase (1–100)

idempotency_key `string`

Unique key to prevent duplicate purchases on retries

REQUEST

terminal

```
curl -X POST \
  -H "Authorization: Bearer YOUR_API_TOKEN" \
  -H "Content-Type: application/json" \
  -d '{
    "product_slug": "chatgpt",
    "subscription_type_slug": "plus-1-month",
    "quantity": 3,
    "idempotency_key": "order-abc-123"
```

```
  }' \
  https://keys.ovh/api/v1/purchase
```

RESPONSE

terminal

```
{
  "success": true,
  "data": {
    "order_number": "a1b2c3d4e5f6g7h8i9",
    "product": "ChatGPT",
    "subscription": "Plus 1 Month",
    "quantity": 3,
    "amount": 30.00,
    "status": "delivered",
    "created_at": "2026-03-09T18:00:00Z",
    "keys": [
      "XXXXX-XXXXX-XXX",
      "YYYYY-YYYYY-YYY",
      "ZZZZZ-ZZZZZ-ZZZ"
    ],
    "balance_after": 70.00
  }
}
```

Use idempotency_key to safely retry requests without double-charging

Volume discounts are applied automatically based on quantity

GET /balance

Returns your current account balance.

REQUEST

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  https://keys.ovh/api/v1/balance
```

RESPONSE

terminal

```
{
  "success": true,
  "data": {
    "balance": 100.50,
    "currency": "USD"
  }
}
```

GET /orders

Returns a paginated list of your API purchase orders.

PARAMETERS

page `integer`

Page number (default: 1)

per_page `integer`

Results per page, max 100 (default: 20)

REQUEST

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  "https://keys.ovh/api/v1/orders?page=1&per_page=10"
```

RESPONSE

terminal

```
{
  "success": true,
  "data": [
    {
      "order_number": "a1b2c3d4e5f6g7h8i9",
      "product": "ChatGPT",
      "subscription": "Plus 1 Month",
      "quantity": 3,
```

```
      "amount": 30.00,
      "status": "delivered",
      "created_at": "2026-03-09T18:00:00Z"
    }
  ],
  "meta": {
    "current_page": 1,
    "last_page": 1,
    "per_page": 10,
    "total": 1
  }
}
```

GET /orders/{orderNumber}

Returns details of a specific order including the purchased keys.

PARAMETERS

orderNumber `string` REQUIRED

Order number from the purchase response

REQUEST

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  https://keys.ovh/api/v1/orders/a1b2c3d4e5f6g7h8i9
```

RESPONSE

terminal

```
{
  "success": true,
  "data": {
    "order_number": "a1b2c3d4e5f6g7h8i9",
    "product": "ChatGPT",
    "subscription": "Plus 1 Month",
    "quantity": 3,
    "amount": 30.00,
    "status": "delivered",
```

```
    "created_at": "2026-03-09T18:00:00Z",
    "keys": [
      "XXXXX-XXXXX-XXX",
      "YYYYY-YYYYY-YYY",
      "ZZZZZ-ZZZZZ-ZZZ"
    ]
  }
}
```

POST /activate

Activates a purchased key. Requires the key code and account access token.

PARAMETERS

key `string` REQUIRED

The purchased activation key

user_token `string` REQUIRED

Account access token

REQUEST

terminal

```
curl -X POST \
  -H "Authorization: Bearer YOUR_API_TOKEN" \
  -H "Content-Type: application/json" \
  -d '{"key":"XXXXX-XXXXX-XXX","user_token":"..."}' \
  https://keys.ovh/api/v1/activate
```

RESPONSE

terminal

```
{
  "success": true,
  "data": {
    "email": "k**s@mail.com",
    "product": "ChatGPT",
    "subscription": "Plus 1 Month",
    "activated_at": "2026-02-08T16:50:00Z"
```

```
    }
  }
```

GET /key/{code}/status

Check the current status of a key by its code.

REQUEST

terminal

```
curl -H "Authorization: Bearer YOUR_API_TOKEN" \
  https://keys.ovh/api/v1/key/XXXXX-XXXXX-XXX/status
```

RESPONSE

terminal

```
{
  "success": true,
  "data": {
    "key": "XXXXX-XXXXX-XXX",
    "status": "used",
    "product": "ChatGPT",
    "subscription": "Plus 1 Month",
    "activated_at": "2026-02-08T16:50:00Z",
    "email": "k**s@mail.com"
  }
}
```

POSSIBLE STATUSES

available	Key is available for activation
used	Key has been activated
expired	Key has expired

POST /keys/batch-status

Check the status of multiple keys in a single request. Send an array of key codes and receive their statuses.

REQUEST

terminal

```
curl -X POST \
  -H "Authorization: Bearer YOUR_API_TOKEN" \
  -H "Content-Type: application/json" \
  -d '{"keys":["XXXXX-XXX","YYYYY-YYY"]}' \
  https://keys.ovh/api/v1/keys/batch-status
```

RESPONSE

terminal

```
{
  "success": true,
  "data": [
    { "key": "XXXXX-XXX", "status": "available" },
    { "key": "YYYYY-YYY", "status": "used",
      "activated_at": "2026-02-08T16:50:00Z" },
    { "key": "ZZZZZ-ZZZ", "status": "invalid" }
  ]
}
```

⚠ Maximum 500 keys per request.

⚠ Error Handling

All errors follow a consistent format with an error code and human-readable message.

terminal

```
{
  "success": false,
  "error": "key_not_found",
  "message": "Key not found or not available"
}
```

401 `missing_token` — Authorization header is missing

401 `invalid_token` — Token not found or invalid

403 `token_inactive` — Token has been deactivated

403 `token_expired` — Token has expired

403 `ip_not_allowed` — Request IP is not in the whitelist

429 `rate_limit_exceeded` — Too many requests — try again later

404 `key_not_found` — Key not found or not available

422 `activation_failed` — Activation failed

422 `product_not_found` — Product not found or not available

422 `subscription_not_found` — Subscription type not found

422 `out_of_stock` — Product is out of stock

402 `insufficient_balance` — Insufficient account balance

500 `purchase_failed` — Purchase failed — try again

404 `order_not_found` — Order not found
